Languages: HTML5 + CSS3, JavaScript, C#, Typescript

Databases: SQL (SSMS), Firebase (Nosql), Azure Table Storage

Frameworks: .NET CORE, Angular2 & 4, EmberJs, Nancy, MVC

Operating Systems: Linux, Windows, Ubuntu, MacOSX

SUMMARY

Former IT Administrator turned developer. I have spent the past year dedicating myself to studying Web Development, and have become well versed in some of the most common languages, including HTML, CSS, JavaScript, C# and .NET.

EXPERIENCE:

Software Development Intern, Brak Software Inc: Satori Reader

Seattle, WA August 2017 - Present

I am currently working as an intern for the Japanese Learning Application, Satori Reader, where I implement bug fixes and feature work

Technology/Skills used

- .NET MVC
- Typescript
- Restful Routing
- Less/CSS

Software Development Intern, ChalkDoc

Seattle, WA June 2017 - July 2017

I was one of two interns tasked with rebuilding a quiz game web application called Kahoot into a similar functioning app called Heyloo. Using an open source base written in AngularJS, but almost entirely our own Angular2 (AngularJS) code, we setup a site with restful routing to separate host and user views that was ready to integrate with the ChalkDoc website after 5 weeks.

Technology/Skills Used

- Open Source Technology
- Angular 2/4
- Restful Routing
- Resolve Routing (Angular2)
- Ng2-Charts

IT Administrator, DatStat Inc.

Seattle, WA August 2015 - October 2016

I was the lone IT worker at a company of about 25-29 employees managing an office network and a .NET Development environment. I managed all the basic technology (word, outlook, basic programs), everyone's laptops/work machines, as well as the backend of about 20 servers across varying operating systems for over 100 customers.

Accomplishments

- Picked up the roll of Admin extremely quickly with minimal experience
- Successfully migrated multiple customers across multiple servers
- Recovered and remapped an entire network infrastructure
- Troubleshoot issues across an unknown network.

Continuing education via Epicodus & freecodecamp.com, October 2016 - June 2017

I began my coding experience with freecodecamp.com and ran through their Front End Development course, studying independently for two months. In December I signed up for the .NET track from Epicodus, and have since gained increased experience in HTML and CSS, Ember, and Angular 2.0, as well as C# with the .NET Core.

Skills Gained

- Working in cooperative dev environment
- Utilize foreign tech
- Gaining foothold in listed languages
